Clone Detection

Algorithm

```
1 buildIndex(B, sim,  $\theta$ )
2 begin
3    $I, R \leftarrow \{\}$ 
4   for each code block  $b_1$  in B do
5      $b_1 \leftarrow \text{sort}(b_1, \text{globalTermPositionMap})$ 
6      $i \leftarrow 0$ 
7     while  $i \leq (|b_1| - \lceil \theta |b_1| \rceil + 1)$  do
8        $I_t \leftarrow I_t \cup \text{id}(b_1)$ 
9       /* Here  $t$  is a term at  $b_1[i]$  */
10       $b_1[i] \leftarrow 0$ 
11    end
12  end
13  return R
14 end
15 buildForwardIndex(B)
16 begin
17    $FI \leftarrow \{\}$ 
18   for each code block  $b_1$  in B do
19      $FI_{\text{id}(b_1)} \leftarrow \text{terms}(b_1)$ 
20   end
21 end
22 detectClones( $b_1, I, sim, t$ )
23 begin
24    $\text{candidatesList} \leftarrow \text{new ArrayList}()$ 
25    $\text{cloneSet} \leftarrow \{\}$ 
26    $b_1 \leftarrow \text{sort}(b_1, \text{globalTermPositionMap})$ 
27   for each term  $t$  in  $\text{prefix}(b_1)$  do
28     for each  $\text{id}(b_2)$  in  $I_t$  do
29        $\text{candidatesList.add}(\text{id}(b_2))$ 
30     end
31   end
32   for each  $\text{id}(b_2) \in \text{candidatesList}$  do
33      $\text{simVal} \leftarrow \text{sim}(b_1, FI_{\text{id}(b_2)})$ 
34     if  $\text{simVal} \geq \theta$  then
35        $\text{cloneSet} \leftarrow \text{cloneSet} \cup \{\text{id}(b_1), \text{id}(b_2), \text{simVal}\}$ 
36     end
37   end
38  return cloneSet
39 end
```

Architecture

User Interface

Step 1

marker showing clones detected for this method

The screenshot shows the Eclipse IDE interface. On the left, the Package Explorer displays a project structure with 'codeclonedetection' as the master. The 'src' folder contains several sub-packages, with 'indexbased' expanded to show 'SearchManager.java' selected. The main editor window displays the source code of 'SearchManager.java'. A red triangle marker is placed at the beginning of the 'genReport()' method (line 143). A callout bubble points to this marker with the text 'marker showing clones detected for this method'. To the right of the code editor, a stick figure icon is labeled 'Developer Working on this method'. The bottom of the IDE shows the Console window with the output: '<terminated> HelloWorld [Java Application] /Library/Java/JavaVirtualMachines/jdk1.7.0_09.jdk/Contents/Home/bin/java (Apr 28, 2014 2:25:40 PM) Foo I am bar'.

```
136 .....System.out|\n137 .....println("Please provide all 3 command line arguments, exiting now.");|\n138 .....System.exit(1);|\n139 .....}|\n140 .....}|\n141 .....}|\n142 .....}|\n143 .....private void genReport() {\n144 .....String header = "";\n145 .....if (!this.appendToExistingFile) {\n146 .....header += "fwd_index_time, inverted_index_time, "\n147 .....+ "globalTokenPositionCreationTime, num_candidates, "\n148 .....+ "num_clonePairs, total_run_time, searchTime, "\n149 .....+ "timeSpentInSearchingCandidates, timeSpentInProcessResult, "\n150 .....+ "isPrefixmode, operation, sortTime_during_indexing\\n";\n151 .....}\n152 .....header += this.timeFwdIndex + ", ";|\n153 .....header += this.timeInvertedIndex + ", ";|\n154 .....header += this.timeGlobalTokenPositionCreation + ", ";|\n155 .....header += this.numCandidates + ", ";|\n156 .....header += this.clonePairsCount + ", ";|\n157 .....header += this.timeTotal + ", ";|\n158 .....header += this.timeSearch + ", ";|\n159 .....header += this.timeSpentInSearchingCandidates + ", ";|\n160 .....header += this.timeSpentInProcessResult + ", ";|\n161 .....header += this.isPrefixMode + ", ";|\n162 .....if (this.action.equalsIgnoreCase("index")) {\n163 .....header += this.action + ", ";|\n164 .....header += this.indexer.bagsSortTime;\n165 .....}\n166 .....} else {\n167 .....header += this.action;\n168 .....}\n169 .....}\n170 .....Util.writeFile(this.outputWriter, header, true);\n171 .....}\n172 .....}\n173 .....private void doIndex() throws IOException, ParseException {\n174 .....}
```

User Interface

Step 2

on clicking the marker
developer sees the similar methods
sorted by their similarity score

The screenshot shows the Eclipse IDE interface. The Package Explorer on the left shows the project structure, with `SearchManager.java` selected under `indexbased`. The main editor displays the source code of `SearchManager.java`. A red triangle marker is placed on line 143. A popup window is open, showing a list of similar methods sorted by similarity score. The popup lists various methods such as `getQueryPath`, `searcher`, `testCase`, `th`, `threshold`, `timeIndex`, `timeGlobalTokenPositionCreation`, `timeInvertedIndex`, `timeSearch`, `timeSpentInProcessResult`, `timeSpentInSearchingCandidates`, `timeTotal`, `cloneD`, `doIndex`, `doSearch`, `equalsObject`, and `getResult`. The main code editor shows the following code snippet:

```
136 ..... System.out{
137 ..... println("Please provide all 3 command line arguments, exiting now.");
138 ..... System.exit(1);
139 ..... }
140 ..... }
141 ..... }
142 ..... }
143 ..... System.out{
144 ..... println("Please provide all 3 command line arguments, exiting now.");
145 ..... System.exit(1);
146 ..... }
147 ..... }
148 ..... }
149 ..... }
150 ..... }
151 ..... }
152 ..... }
153 ..... }
154 ..... }
155 ..... header += this.clonePairsCount + ", ";
156 ..... header += this.timeTotal + ", ";
157 ..... header += this.timeSearch + ", ";
158 ..... header += this.timeSpentInSearchingCandidates + ", ";
159 ..... header += this.timeSpentInProcessResult + ", ";
160 ..... header += this.isPrefixMode + ", ";
161 ..... if(this.action.equalsIgnoreCase("index")){
162 ..... header += this.action + ", ";
163 ..... header += this.indexer.bagsSortTime;
164 ..... }else{
165 ..... header += this.action;
166 ..... }
167 ..... }
168 ..... }
169 ..... }
170 ..... Util.writeFile(this.outputWriter, header, true);
171 ..... }
172 ..... }
173 ..... private void doIndex() throws IOException, ParseException {
174 ..... }
```

On the right side of the editor, there is a stick figure icon and the text "Developer Working on this method".

User Interface

Step 3

There is no step 3

:) Thanks
